                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nat. Genet. 36:40-45(2004).
--- FUNCTION: Orphan receptor.
--- SUBCELLULAR LOCATION: Integral membrane protein.
--- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
--- SIMILARITY: Contains 11 leucine-rich (LRR) repeats.
"The three subfamilies of leucine-rich repeat-containing G protein-coupled receptors (LGR): identification of LGR6 and LGR7 and the signaling mechanism for LGR7,";

MOI. Endocrinol. 14:1257-1271(2000).

Endocrinol. 12:1830-1845(1998).
-!- FUNCTION: Orphan receptor.
-!- SIMCLALIGAR LOCATION: Integral membrane protein.
-!- SIMLIARITY: Belongs to the G-protein coupled receptor 1 family.
-!- SIMLIARITY: Contains 15 leucine-rich (LRR) repeats.
                                                                                                                By similarity.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Muc. Acids Res. 25:338-3402) similarity (expect < 1e-34) to the EST and cDNA sequences Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                               Submitted (07-AUG-2000) Human Genome Sequencing Center, Department of Molecular and Human Genetice, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 145165)

is substituted for an endogenous residue in IC3 at a position 16 amino acids N-terminal of an endogenous proline in TM6 to form a sequence X- (AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 camino acid stretch between the substituted amino acid and the Pro may be endogenous, non-endogenous, or amixture of endogenous and non-endogenous candonists. An agonists and partial agonists for use as pharmaceutical agents. The mutant proteins are also useful in research settings for elucidating the roles of the receptors in normal and diseased conditions. Antagonists for a particular GPCR are useful for treating store elucidating the roles of the receptors in normal and disease and discorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used directly for screening of compounds without the need for endogenous ligands. The present sequence represents cDNA encoding a human wild-type GPCR used in an ecreptor of the invention. This was cloned and subjected to site-directed mutagenesis (SDM) to generate DNA encoding the corresponding mutant of the invention

Sequence 2724 BP; 665 A; 723 C; 554 G; 782 T; 0 U; 0 Other;

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or constitution of a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR. and in the production of specific antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for disquising and designation immune-related diseases, immunological-related diseases, cell creating immune-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AlDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, cestecatrbritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohm's disease, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, concert, disease, parkinson's disease, multiple sclerosis, pain, psoriasis, brother disorders, theumatoid arthritis, trauma, ulcers, or hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or whypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or used in immunoassays and immunodiagnosis, ABP821523 to ABE22869 encode GPCR proceins given in ABP81675 to ABP82253 to ABE22869 encode cemplification of the present invention G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoprosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nauses; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma; ulcer; gene; des New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or 9 Gape ö DB 8; Length 2724; Sequence 2724 BP; 665 A; 723 C; 554 G; 782 T; 0 U; 0 Other; 0; Indels 100.0%; Score 2724; 100.0%; Pred. The invention relates to a method for treating a non-endogenous, constitutively active version of an endogenous human G protein-coupled receptor (GPCR) that thas a transmembrane-6 (TM6) region and an intracellular-3 (IC3) region, by substituting a specific amino acid in the TM6 region with a different amino acid, and testing for constitutive cutivity. The method is useful for reating a constitutively active version of an endogenous human GPCR that comprises a transmembrane 6 region and an intracellular loop 3 region. The altered human GPCR compounds for identification of inverse agonists or screening test compounds for identification of inverse agonists or partial agonists of GPCR polypeptides, which may have therapeutic uses. The altered GPCRs may also be used in vivo or in vivo in biological research. A nucleic acid encoding the altered GPCR may be used to create a transgenic animal expressing the altered GPCR may be used to create a transgenic animal expressing the altered GPCR comman G protein-coupled receptor without the need for provision of a ligand for the receptor. This is particularly useful in allowing screening of compounds against orphan receptors for which no ligand is currently known. This sequence represents CDNA encoding a human GPCR continent of the contine contined and an interest 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a constitutively active, non-endogenous version of an endogenous human G protein-coupled receptor (GPCR). The GPCR is used for screening therapeutic compounds as inverse agonists, agonists or partial agonists. The GPCR can be also be used to elucidate and understand the roles of GPCRs in normal and diseased humans. The GPCR need not be purified and isolated to be used to screen for therapeutic compounds. The utility of the GPCR as a research tool is enhanced because the role of a particular receptor can be understood before the endogenous ligand is identified. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

New antisense oligonucleotide comprising a sequence targeted to a nucleic acid encoding G protein-coupled receptor 49, useful for preparing a composition for treating e.g., neural or endocrine system disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GGGGGCACTCTCCCAGGTCTGGTGTTGCTGAGGGGCTGCCCCACACACTGTCATTGC 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel compound comprising a sequence targeted to a nucleic acid encoding G protein-coupled receptor (GPCR) 49, that specifically hybridises with the nucleic acid encoding G protein-coupled receptor 49 and inhibits its expression. The compound of the invention demonstrates neuroprotective activity and may be useful for preparing a composition for treating neural or endocrine system disorders, as well as during gene and antisense therapy. The current sequence is that of the human G protein-coupled receptor (GPCR) 49 DNA of the invention.

The invention relates to human and mouse G protein-coupled receptors

(GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing and nucleic acids of the invention; methods of screening for associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR pene of the invention; a mouse comprising a mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the trasngenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising comprising a GPCR nucleic acid. The GPCR polymeticles of the invention. The invention further discloses variants of the GPCR polymeticles and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of discrets of the adrenal gland; disorders (e.g., Alzheimer's disease, (e.g., Crohn's disease including neuropathy, Parkinson's disease or schizophrenia); disorders of the adrenal gland; disorders of the colon or intestine conversion, and solution disorders of the colon or intestine conversion of an amenia or leukaemia); immuned isorders of e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders (e.g., autoimmune disorders (e.g., canders (e.g., canders (e.g., canders (e.g., canders)); muscular disorders (e.g., autoimmune disorders (e.g., canders); the present sequence represents a GPCR-encoding thyroid (e.g., canders). The present sequence represents a GPCR-encoding part did not form part of the printed sequence represents a GPCR-encoding part of the hown were obtained sequence represents directly from WIPO at the colon of the printed sequence are appeared the disorders of the electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

```
whose expression is upregulated or downregulated in specific cancers or there diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; use of such antibodies for drug targeting; colypeptide of the invention; use of such antibodies for drug targeting; colypeptides and methods are useful for diagnosing, prognoshing and treating antibodies and methods are useful for diagnosing, prognoshing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease, atheroscalerosis, inflammatory diseases, autoimmune diseases, ratinal neovascularistaion syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present
